

Animal Biosafety Level 3

Animal Biosafety Level 3 (ABSL3) procedures have been developed by the Office of Animal Resources (OAR), Environmental Health and Safety (EHS) and the Carver College of Medicine's BSL3 Oversight Committee (CCOMBOC). Policies and procedures are described in detail within the BSL3 Core Facility Biosafety Manual. BSL3 research staff are required to follow all safety and security procedures of the BSL3 Core Facility. In addition, each Principal Investigator must submit a separate BSL3 Standard Operating Procedure to the CCOMBOC for review and approval, detailing laboratory and animal procedures within this research project.

List the hazardous agent(s) that will require ABSL3 containment.

List laboratory emergency contact information.
